Hopefully G. F. M. included this correction in the T.C.D. Library
copy. NM

"Evidence of Former Tree Growth at Clonsast"

An error in transcription occurs four lines from the bottom
of page 4. The passage should read ----

"That nearest the zero line represents the pollen value expressed as a percentage of the total of all arboreal and non-arboreal pollen present (but excluding wet-habitat species). The outer curve of each pair represents the pollen value expressed as a percentage of total arboreal pollen only, in the case of trees, and as a percentage of total non-arboreal pollen only, in the case of non-arboreal plants"
